(54) PANORAMA IMAGE SYNTHESIS DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide the panorama image synthesis device in which plural images are synthesized in an excellent way, regardless of simple configuration.

SOLUTION: An image picked up by an electronic camera 307 is copied to an HD of a computer body 301 via a general-purpose interface 306 and displayed on a display device 302. Furthermore, the synthesizer discriminates whether an original is an original image mainly consisting of characters or a usual natural image after a corresponding point extract processing of the image relating to the image synthesis is finished and an overlap range of the image is obtained. Based on the result of discrimination, a way of seamless processing is changed to carry out the synthesis processing.

LEGAL STATUS

[Date of request for examination] 27.12.1999

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or

application converted registration]

[Date of final disposal for application]

[Patent number] 3530653

[Date of registration] 05.03.2004

[Number of appeal against examiner's decision
of rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
